

TARP CONTROL SYSTEM

www.metadiag.com

General Information

This panel is designed to control a motorized awning system. The system can be easily managed through the buttons on the panel and the remote control. To ensure safe usage and longevity of the device, please follow the instructions below.

Buttons on the Panel and Their Functions

2.1 On/Off Button (Power Button)

Usage: Press this button once to start the system. Press the button again to turn off the system.

Emergency Stop Button

In emergency situations, you can immediately stop the system by pressing the red button.

To restart the stopped system:

1. Release your hand from the button.
2. Turn the button in the direction of the arrow to reset and restart the system.

This process ensures safe stopping and restarting during emergencies

Awning Open Button

Usage: When the awning open button on the panel is pressed, the awning will fully extend.

The same function can also be performed using the up arrow (▲) button on the remote control. However, when using the remote control, the awning will only extend while the button is being pressed, allowing for adjustable opening levels.

Note: Ensure that the awning's path is clear before operation.

Awning Close Button

Usage: When the awning close button on the panel is pressed, the awning will fully retract.

The same function can also be performed using the down arrow (▼) button on the remote control. However, when using the remote control, the awning will retract only while the button is being pressed, allowing for adjustable closing levels.

Note: Always ensure the awning's path is free of obstructions before operating.

Awning Stop Button

Usage: During the opening or closing process, you can press this button to stop the awning.

The same function can also be performed using the square (■) button on the remote control.

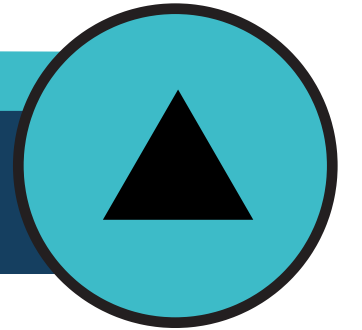

Note: This allows you to pause the awning's movement at any desired position for precise adjustments.

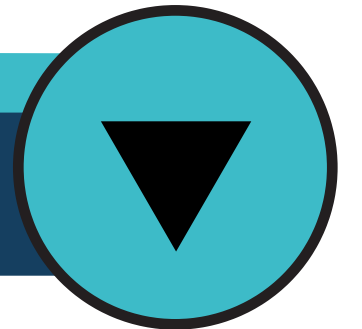

Using the Remote Control

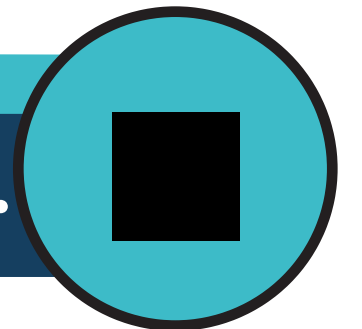

Awning Open Button

Awning CloseButton

Awning Stop Button.

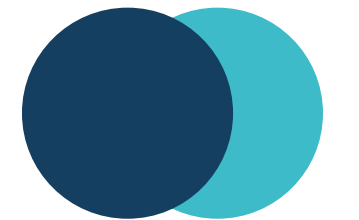

Usage Instructions

1. Power On: Before starting, press the On/Off button to power on the system.
2. Opening or Closing the Awning:
 - Use the awning open or awning close buttons as needed to begin the desired operation.
3. Stopping the Awning:
 - During movement, press the stop button to halt the awning at your desired position.
4. Emergency Stop:
 - In case of an emergency, press the red emergency stop button to immediately stop the system.

Note: Always ensure the awning's path is clear before operating the system. Follow these instructions for safe and efficient use of the motorized awning.

Safety Warnings

The emergency stop button should only be used in emergencies.

Do not press the buttons hard or hold them down continuously.

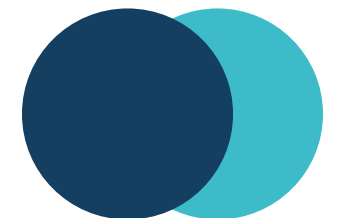

In case of any malfunction, contact the authorized technical service.
